To whom it may concern;

It is my pleasure to recommend Paul J. Doyle and Petroleum Marine Consultants, LLC for marina fueling system projects requiring design, removal and installation of underground storage tanks and state of the art fueling equipment. Petroleum Marine Consultants has recently completed a complete fuel system refit for our Municipal Marina; they were awarded the \$517,000 project thru the City's competitive bid process.

Paul and his staff operated the project site in a safe and very professional manner. He and his staff are very capable of adapting and overcoming unforeseen issues and meet project deadlines.

The City is very pleased with the final product delivered by Petroleum Marine Consultants, LLC and with the level of follow up service and technical assistance provided after the project was completed.

Sincerely,

Edward M. Seissiger
Project Manager
